

V. SELLING STOCKS USING LSI CHARTS

The LSI Chart of NWRE shows a classic “rollover” type of pattern whereby the LSI Line gradually rolls over as positive spikes turn to negative spikes. The pattern of six positive spikes at 1-6 is broken with the negative spike at A.

LSI Chart #2 shows a second negative spike at B that confirms the net selling sentiment of institutional investors. Long investors should be out of these shares with short sellers looking for positive activity to take positions.

The third negative spike on LSI Chart #3 is a strong indication of further weakness likely over the near to medium term.
